To whom it may concern,

SafetyBOSS Inc. has recently purchased and installed the "Engine Guardian Pro" positive air shutdown from Diesel Tech Industries for our fire trucks. SafetyBOSS at times works in more severe conditions than other companies in the Oil & gas industry. Our decision to install the Guardian Pro was made simple given the added protection, ease of operation and remote capabilities this unit provides the engine on shut down and restarts. We also decided that with the upgrades Diesel Tech offers for this unit, we would not have to buy a whole new unit and simply add to the system as we deem necessary.

After testing and using the Guardian Pro in different situations we've responded to, SafetyBOSS Inc. has decided to install Diesel Tech's equipment in our entire fleet.
